Gene-level local junction-usage associations in RR23 cerebellum

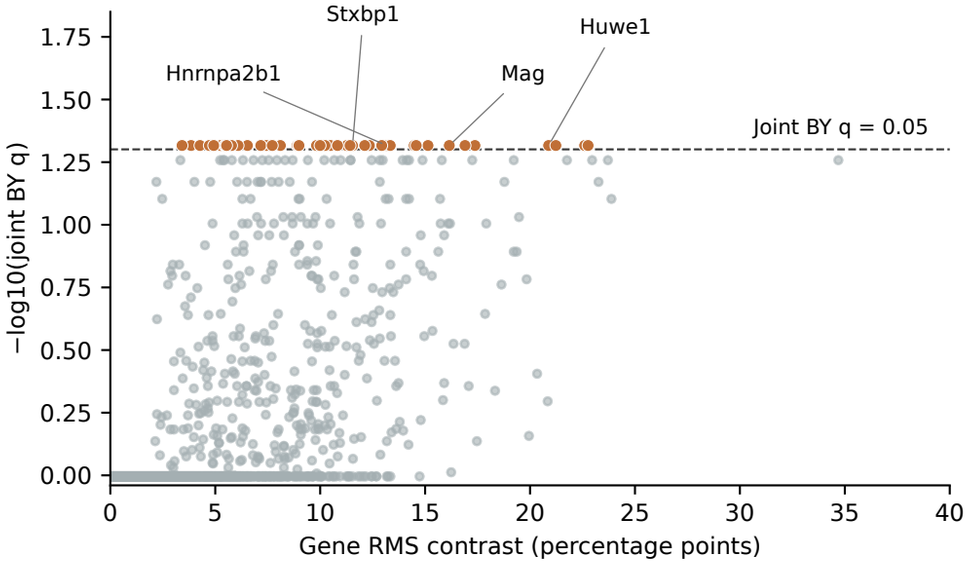

1,983 genes · 3,239 measured events · 26 animals · 5,949 joint tests

A Correction across every gene and contrast

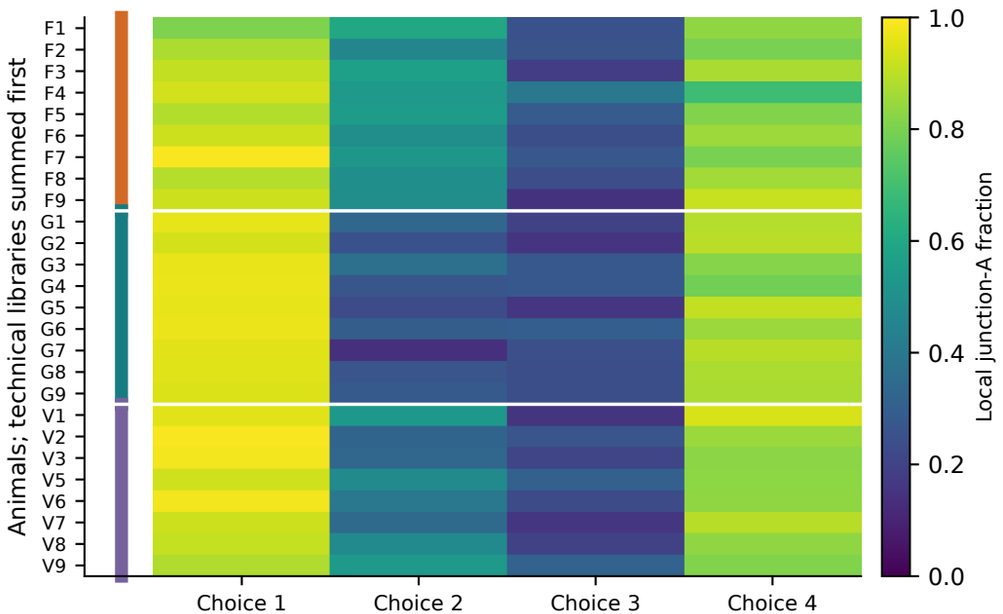

BH: dependence assumptions; BY: arbitrary dependence

B FLT–GC: magnitude and corrected evidence

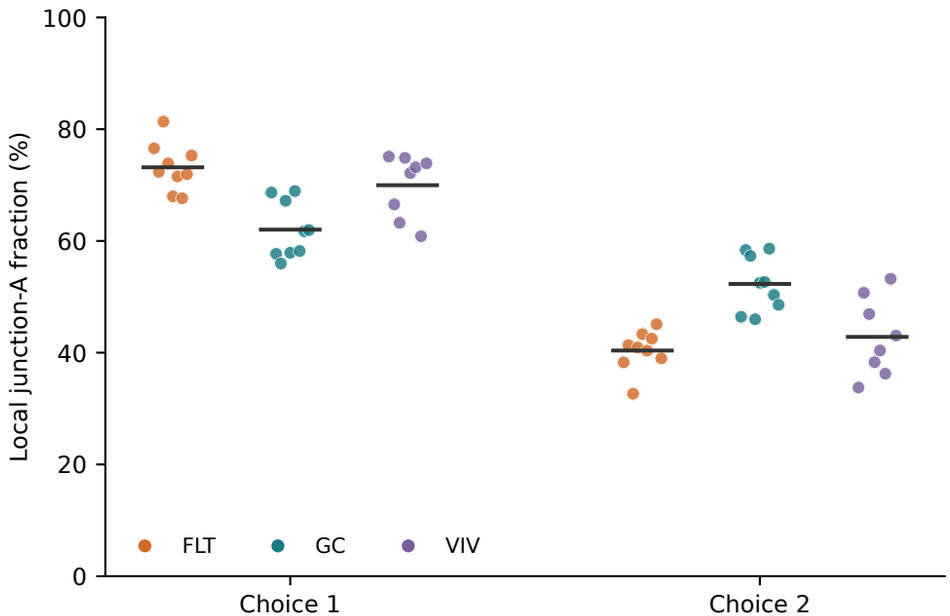

Labels selected after analysis for illustration

C Hnrnpa2b1: all measured choices and animals

Post hoc illustration: FLT–GC RMS 13.17 pp; joint BY q = 0.0483

D Stxbp1: individual-animal measurements

Post hoc illustration: FLT–GC RMS 11.54 pp; joint BY q = 0.0483

Association only: flight and collection date are aliased. Local choices do not establish full isoforms or protein changes.
