
a) Scatter: every cluster
n = 702 clusters
Spearman ρ = 0.052
exact p = 0.377
other clusters
RR23 BY-positive
RR10 projected effect (pp)
RR23 flight–ground evidence, −log10 p
b) Hexbin: accumulation
Spearman ρ = -0.20
BY-positive
clusters per bin
Flight–ground effect, TV (pp)
Minimum selected reads per animal
c) Density contours
shared FLT: ρ = 0.52
disjoint, depth-adjusted:
ρ = 0.31
Flight–vivarium effect, TV (pp)
Flight–habitat effect, TV (pp)
d) Marginal distributions: two external cohorts
n = 270 common clusters
Spearman ρ = 0.117 (descriptive)
RRRM2 projected effect (pp)
RR10 projected flight–ground effect (pp)
e) 2D density heatmap
shared GC: ρ = 0.57
disjoint, depth-adjusted:
ρ = 0.32
noise-only reference:
ρ = 0.12
clusters per bin
Habitat–vivarium effect, TV (pp)
Flight–habitat effect, TV (pp)
